### Milestone 1 Peer Review – All-Americans

#### Quality of Work – Full Marks 3 Points

Comments: Overall this project feels like it will take some time to do and will require some extensive research in order to complete. The readme file, as well as the initial idea of the project is clear, correct, and organized about what they would like to do with this project.

#### Intellectual Merit – Full Marks 3 Points

Comments: The project not only takes a dataset and provides extensive easy to read details about individual athletes, but also has the heavier side of researching every single option available within the All-American athlete spectrum. This project is substantial, creative, and interesting in all fields, as you'll be using more than just a simple coded application to provide these details.

#### Video – Partial Credit 1 Point

Comments: Could not gain access to the video in time of the research paper, overall, I feel like the video would have had great detail in it, as the layout of the overall project within GitHub is well setup and maintained well.
